Data Reconciliation Definition

The purpose of a **Data Reconciliation** (**DR**) exercise is ensure that the **Data Migration** has achieved the expected outcome, namely that the **Target Data** has migrated successfully from the **Source System** into the test Bromcom system.

Method

This document guides **Users** through a **Manual** check of the **Migrated Data** using the **Customer Interface** of SIMS and Bromcom, to ensure **Data** has **Migrated** as planned.

The **Migration** may identify problems relating to the quality of **Data** in the legacy system that prevent or hamper the **Migration**. It is unusual for **Data** to be in such a poor way but when this does happen, **Users** can take the opportunity to accurately enter correct **Data** into this new system.

Test Requirements

- The **Data Migration** process has completed with no errors during the **Migration** process. If at any point the **Migration** has reported an error you will need to inform migration@bromcom.com of the error and they will investigate.
- DR exercise will take place against Source Dataset in SIMs and unchanged Bromcom Dataset
- The **Migration Tool** can only be run once it cannot be run multiple times
- The **User** must have sufficient access to both the Bromcom MIS and SIMS.net interface

Checking data totals

The following table can be completed for each year of **Migration**.

Check condition	SIMS.net	Bromcom	Equal?
Total number of Current Students			
Number of Tutor Groups			
Number of Current Staff			
Number of Rooms			

Detailed Data Check

Users should look at 10% of the data in both Bromcom and SIMs.

Staff

Click **Staff**, select a percentage of **Staff** to check. Click **View Staff Details** use the areas on the list to navigate to the **Staff** page to check the key items below.

	Data Area	Checked	Notes	
Staff	Staff Details			
Staff	Previous Names			
Staff	Personal Information			
Staff	Absences			
Staff	Addresses			
Staff	Car Information			
Staff	Next of Kin Details			
Staff	Professional Details
